

Carl Moyer Program Advisory 4-009

When Not to Use of the Fuel Correction Factor

This page updated May 10, 2004

Marine Vessels: Use of a fuel correction factor (FCF) is required only for passenger-carrying ferries (75 or more passengers). This is because those ferries are required to use California diesel fuel. Other categories of marine vessels are not subject to that requirement; therefore, there is no need to apply the FCF to them.

Locomotives: Use of a FCF is not necessary since locomotives are not required to use California diesel fuel.
